Tailored for pets

Large Size Flat Panel Detector Makes Diagnosis Accurate

- Large size
17" * 17" large size flat panel detector provides full images with high quality.
- High resolution
Excellent spatial resolution and signal-to-noise ratio to improve image quality.
- Low noise
The unique noise eliminating technology improves the image quality by 40% and obtains tiny lesion images.

High-end Configuration Brings Excellent Performance

- Imported X-ray tube
High output power, high heat capacity and small focus.
- 440kHz high inverter frequency
The output voltage is more stable to ensure the consistency of radiation quality. Instantly freeze the image, no tailing phenomenon.
- The professional graphical interface
Intelligent and efficient image processing software, greatly improving image quality.

- Floating table
Meet most small and medium-sized vet inspections.
- Smart design
Tableside operation, manual/remote exposure, flexible and compact structure. Take small space, meet different installation conditions.
- Power supply 220V/380V
The high-voltage generator takes single-phase energy storage high-voltage technology, which have less requirement of power supply and wider installation conditions.
- Professional service
Imaging experience more than 18 years with professional after-service team.
